## Imbiber Beads® - Packets

**SKU# ENP IE0077**

Imbiber Beads represent the next evolution in absorbent technology. Unlike polypropylene absorbents, these unique beads absorb and hold onto organic hydrocarbons for added piece of mind. They have a color changing feature that indicates the presence of hazardous materials in a system. Suitable for oils, gasoline, diesel, brake fluid, transmission fluid and more. With a wide variety of options, Imbiber beads are a versatile solution for any containment scenario.

Packets are designed for small, incidental leaks or spills, such as removing oil sheens from sumps or drip pans. They are also featured in the Sediment/Oil versions of the ENPAC Storm Sentinel to prevent contamination to water sources through storm drains.

<b>Dimensions</b>	7" x 7"
<b>Case Quantity</b>	30
<b>Case Weight</b>	9 lbs.
<b>Absorb Capacity (per packet)</b>	36 oz.
<b>Absorb Capacity (per case)</b>	6.9 gal.
<b>Disposal</b>	Per local, state, and federal regulations
<b>Regulations</b>	NPDES, EPA, SPCC

All include information is proprietary to ENPAC LLC
